

01 / THE PROBLEM

Learning is growing. The path from learning to meaningful employment is still fragmented.

01 Skills are invisible

Certificates and courses do not automatically show which capabilities employers value for a specific role.

02 Jobs are noisy

Job descriptions use inconsistent language. Candidates cannot tell whether they are close, ready or wasting time.

03 Progress is unmeasured

Applications, interviews and feedback live in separate tools, so there is no learning loop.

Core insight: the gap is not only skill. It is signal. Learners need evidence, context and a clear next action.

02 / THE SOLUTION

SkillTrack connects evidence, intelligence and action in one visible journey.

PROFILE Skills, projects, preferences	GAP SCAN Compare against target roles	MATCH Rank real-fit opportunities	TRACK Learn from outcomes
---	---	---	-------------------------------------

Closed loop: every application, interview and feedback event improves the next decision. The output is not another list; it is a ranked next best action.

03 / HOW IT WORKS

The experience is organized around the next best action.

01 Capture

Skills, resume evidence, projects, preferences and target roles.

02 Diagnose

Normalize requirements and compare current evidence with role expectations.

03 Act

Practice the highest-value gap with a concrete task and evidence.

04 Learn

Track movement, feedback and outcomes; recalibrate the next recommendation.

Product promise: make the next career move easier to see, easier to do and easier to measure.

Every number answers a student question: Am I ready? What should I improve? Where should I apply?

CAREER READINESS
72%

TARGET ROLES MAPPED
08

APPLICATIONS IN MOTION
04

Readiness by skill cluster

Product sense: strong | Analytics: priority | Communication: improving

Next best action

Build one analytics case study.
It closes the largest gap across three target roles.

Slide 5 is the decision engine: explain the score, prioritize the gap and measure the improvement.

TARGET ROLE Product Analyst		READINESS SCORE 72%	MAPPED EVIDENCE 8 skills 3 priority actions
SQL / analytics HIGH IMPACT DO NEXT: build a case study	Experiment design MEDIUM VIEW action plan	Stakeholder storytelling ON TRACK VIEW evidence	Product sense STRONG Maintain

Why it matters: a gap is a prioritization problem before it is a learning problem. The plan is measurable: task, evidence, deadline, completion and reassessment.

Slide 6 proves whether skilling activity becomes employment movement, while controlling risk before scale.

WISHLIST 12 exploring	APPLIED 8 active applications	INTERVIEW 4 feedback needed	OFFER 1 outcome recorded
---	---	---	--

Impact measures: more relevant applications, less search time, faster feedback loops and better placement movement. These are pilot hypotheses to validate, not guaranteed claims.

Release gates: 01 prototype journey -> 02 security and access control -> 03 score and failure tests -> 04 campus pilot -> 05 scale with live jobs and institutions.

Final ask: test SkillTrack with real learners, validate the scoring and outcome signals, then scale only where evidence supports it.
